

INÍGO

COSMETIC

Dear Doctor or Nurse,

Thank you for the review of my patient.

My patient will require a dressing change once a week for three weeks – three dressing changes in total. My dressing change protocols are as follows:

- Remove all dressings
- Clean all incisions with chlorhexidine or betadine
- Use the patient's phone to take clinical images of the incision sites; she will email these through for my review
- Please provide the patient with your full name and practice details for our records
- If you suspect infection or anything else that you deem unusual, please perform a wound swab, and commence ABs
- I primarily use dissolvable sutures, if non-dissolvable (blue) sutures have been utilized, please remove at week 2
- Dress with steristrips and cover with fixomull or hypafix

After your patient's last scheduled dressing change, the patient should refer to the provided postoperative instructions for further information.

If you have any concerns, please contact my practice nurse on 1300 884 577.

Thank you for your review of my patient.

Kindest Regards,

Dr Ian Chinsee

MBBS FACCS
